Updates on Most Recent Local Activity: Week 49 (November 29 – December 05)

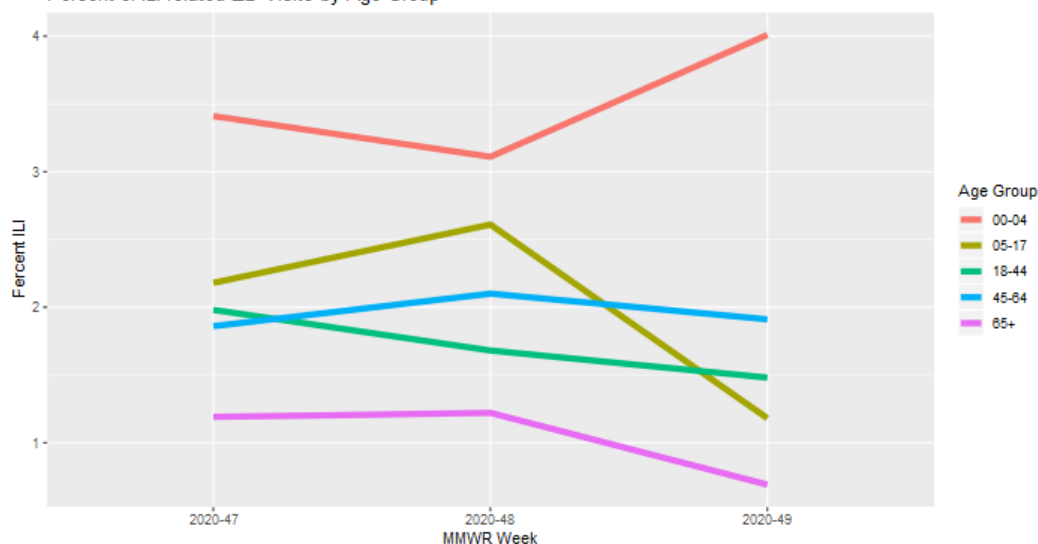

- Influenza-like Illness (ILI) for all ages and Respiratory syncytial virus (RSV) for children 0-4 years old is **similar to what we normally see this time of the year**.
 - Influenza and RSV diagnoses may have lab diagnosed cases earlier this year if healthcare seeking behavior changes lead individuals to be tested when they wouldn't have previously.
 - RSV is a common respiratory virus that is the most common cause of bronchiolitis and pneumonia for children under 1 year of age in the U.S¹.
- During Week 49, **1.6% of Marion County ED visits had ILI symptoms**.
- In Marion County hospitals' ED population, ILI was **most common in the 0 - 4 age group** (4.0%).

Percent of ILI related ED Visits

Local (Week 48)

- The percentage of ILI related ED visits was 1.9%.
- Infants and toddlers, 0 - 4 years old, the highest age-specific percent ILI (3.1%).

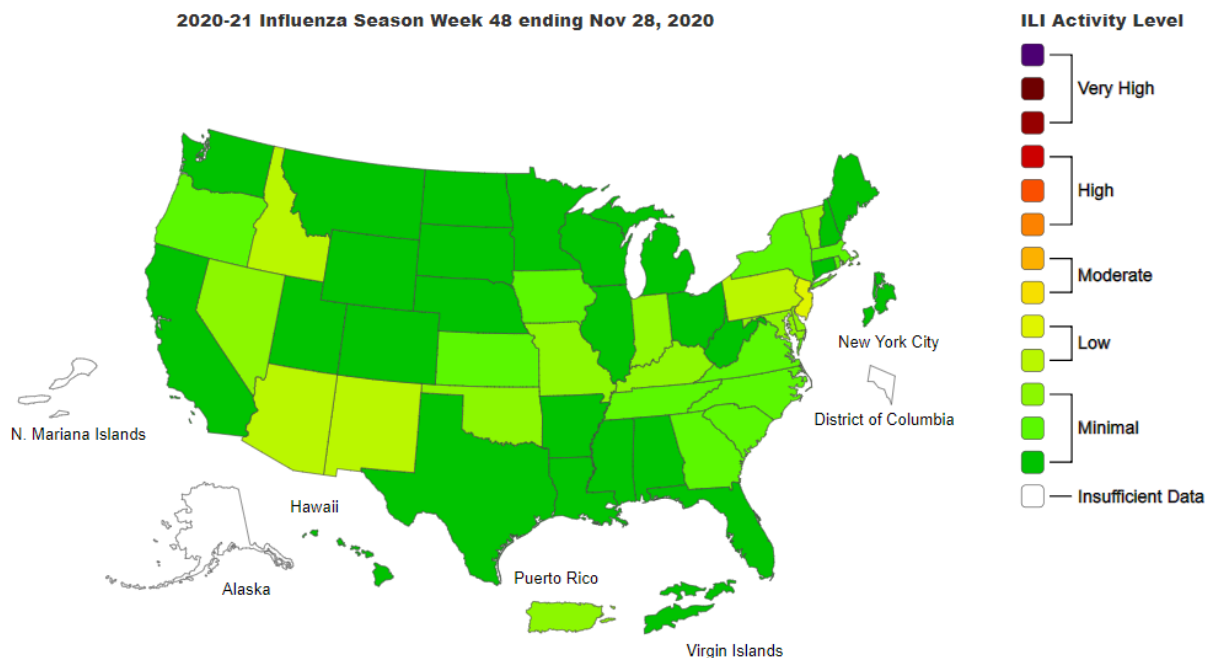

Indiana (Week 48)

<https://www.in.gov/isdh/files/Weekly%20Influenza%20Report-Week%2048-2020-2021.pdf>

- Indiana is experiencing **minimal ILI activity**.
- For Week 48, ISDH reported 2.3% ILI at sentinel provider sites and 1.6% ILI ED and urgent care visits.
- There have been **1 influenza-associated death** this season.
- No specimens were tested at the IDOH Laboratory during Week 48

National (Week 48)

<https://www.cdc.gov/flu/weekly/index.htm>

- **Influenza activity remains lower than usual for this time of year. Confirmed labs as reported by clinical and public health laboratories remains low.** The majority of jurisdictions had minimal influenza activity.
- **Outpatient visits due to ILI stayed at 1.6%**, as reported through the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet). It was 1.6% during the previous week (Week 47).
- **Zero influenza-associated pediatric deaths** have been reported to CDC this flu season.
- During Week 48, there were **17 positive influenza tests sent to clinical laboratories (0.1% positive specimens)**. The positivity percentage was similar to Week 47 at 0.2%.
- During Week 48, 5 (< 1%) of the specimens submitted was positive at **public health laboratories**.
