LETTER FROM THE DIRECTOR

Dear Partner in Health:

It is a pleasure for me to present this 2019 Marion County Community Health Improvement Plan. We discovered and learned a great deal in developing this plan, mainly by accessing the expertise and participation of traditional and non-traditional public health partners. You are encouraged to review this plan and think about how you could participate in this effort aimed at improving the health of Indianapolis.

The 2019 Marion County Community Health Assessment, through community deliberations, identified three health priorities: obesity/diabetes, mental health, and poverty. These health objectives, and health equity, also are reflected in many plans across our county that have been developed by neighborhood organizations and coalitions.

Addressing these issues over the five year CHIP period will be hard work for the members of the 2019 Marion County Community Health Improvement Plan Strategy Committee who have developed goals, objectives, and strategies that will make an impact on these health priorities. I encourage all residents to read this report and work in your own neighborhoods to help us realize these goals and objectives. On behalf of the 2019 Marion County Community Health Improvement Plan Strategy Committee and partnering agencies, we look forward to each of you becoming involved in making Indianapolis a healthy, thriving community.

Sincerely,

Virginia A. Caine, MD

Virginia A. Caine, MD
VISION
Healthy People and Families Living in Healthy Neighborhoods

MISSION
To Promote Physical, Mental and Environmental Health; Prevent and Protect Against Disease, Injury and Disability

C.L.E.A.R. VALUES

COMMUNITY — Promote and protect the health of everyone in the community and provide healthcare to those who are underserved.

LEADERSHIP — Lead the community in health care services, behavior and attitude. We will lead through example.

EXCELLENCE — Embrace the community to excellence in our service delivery, employee performance, facility cleanliness and overall safety.

ACCOUNTABILITY — Accept and embrace the expectations of accountability for our actions. Every employee shall strive to “exceed their expectations” of their job to protect and promote the health of everyone in the community.

RESPECT — Commitment to treat every employee, patient, customer and visitor with dignity and respect at all times.

The Community Health Improvement Plan is a long-term, systematic plan to address issues identified in the most recent Community Health Assessment process in November 2018. The purpose of the Community Health Improvement Plan is to describe how the MCPHD and the communities it serves will work together to improve the health of the population of Marion County. Community stakeholders and partners will use the Community Health Improvement Plan to direct the use of available resources concerning health priorities and to develop and implement policies, programs, and strategies to address health status priorities.

The priorities identified in the Community Health Assessment process in November 2018 are:

- Obesity/Diabetes
- Mental Health
- Poverty
- Health Equity*

The Plan reflects the results of a collaborative planning process that includes significant involvement by a variety of community sectors. The Plan will be communicated to Marion County public health partners and constituents through the IndyIndicators website upon completion.

* Please note, after the last meeting of the CHIP Strategy Committee, health equity has become a recognized area of great public health importance and was added as a fourth priority area in the 2019 – 2024 CHIP. This change is not reflected in the appendices.
The Community Health Improvement Plan (CHIP) is a guide for future health services and policies in Marion County for the next five years. It is a community health planning effort to measurably improve the health of Marion County residents.

The CHIP is a strategic framework for community health, while also being specific enough to guide action. The CHIP is highly collaborative and incorporates and builds upon a broad set of community efforts that have similar purpose and intent. The CHIP brings together a volunteer group of stakeholders from across sectors—private and non-profit organizations, government agencies, academic institutions, community and faith-based organizations, and citizens—to improve health, quality of life, and equity for all residents and visitors of Marion County. The strategy committee reflects a broad group of these stakeholders and additional collaboration is expected during implementation.

The CHIP is flexible and will be modified as conditions, resources, and environmental factors change. In addition to guiding future services and policies for Marion County, the Community Health Assessment and Community Health Improvement Plan are required for the MCPHD to acquire and maintain national public health accreditation. National public health accreditation indicates that the Marion County Public Health Department meets hundreds of standards and measures in delivering the Ten Essential Public Health Services. (See Appendix F.)
The Community Health Assessment Process was as Follows:

January 1 - August 9, 2018:
Planned and prepared the draft topics list.

August 9 - August 23, 2018:
Form Advisory Board and invited it to edit the draft topics list.

August 23 - September 6, 2018:
Created 66 topic comparison table.

September 7 - September 19, 2018:
Advisory Board voted for its top 15 final topics.

September 20 - October 22, 2018:
Epidemiology Dept. prepared the top 15 topics packets.

October 23 - November 7, 2018:
Advisory Board reviewed the topics packets.

November 8, 2018:
Final prioritization meeting with Advisory Board and community members.

Prioritization Criteria were as Follows:
1. How many people are affected by the condition?
2. How severe is the condition for each individual who has it?
3. Does this condition impact multiple outcomes? If so, what other outcomes?
4. Does our community have resources to address these issues?
5. What type of prevention, if any, can be used?
6. Is this an area that has increased, decreased, or stayed the same?
7. Is there disparity in incidence of occurrence among subpopulations?
Diabetes and obesity lead to many problems among individuals and populations. Each contributes to negative health impacts, and therefore increased medical costs, and decreased years of life.

Diabetes is a chronic disease characterized by high blood sugar (blood glucose), due to problems with the body’s insulin. The high levels of blood sugar cause damage to organs and tissue throughout the body, resulting in an increased risk of developing many chronic health conditions. In addition, 9 out of 10 people with diabetes are obese, which brings its own health problems. Obesity, or having too much body fat, increases the risk of developing nearly every chronic disease, including hypertension, coronary heart disease, stroke, cancer, Alzheimer’s disease, and any other type of dementia. In the U.S. in 2017, the cost of diagnosed diabetes was $327 billion, and the estimated national cost of obesity is $147 billion - $210 billion per year. With Marion County having about 0.3% of the U.S. population, that translates to a local, annual cost of $950 million for diabetes and $430 million to $610 million for obesity.

Among Marion County adults in 2018, about four out of ten (38%) are obese, and more than one in ten (14%) have chronic diabetes. Roughly half (46-53%) of those with obesity indicated that they had been diagnosed with asthma, depression, high cholesterol, heart conditions, or high blood pressure. Similarly, those with diabetes were nearly twice as likely to have asthma, and three times more likely to have heart conditions than the Marion County population. Nationally, diabetes was the 7th leading cause of death in 2017, accounting for over 80,000 deaths. In Marion County diabetes was the 6th leading cause of death in 2017, with a mortality rate of 27 per 100,000.

Life style changes and system-level interventions are two of the valuable strategies for decreasing obesity and diabetes rates. Increasing physical activity and eating more healthy foods, such as fruits and vegetables, are the safest and most cost-effective solutions to reduce fat and weight. However, to see significant county-wide decreases, system-level changes are needed. Research suggests that education, without environmental or economic changes, has little influence on behavior.

Increasing safe and convenient access to grocery stores with fresh fruits and vegetables and green space for exercise will remove some of the barriers to making these lifestyle changes.

[vi] 2018 Marion County Community Health Assessment Survey (OR3708)
Appendix C contains data summary sheets on each of the possible priority areas voted on in the CHA Advisory Board Meeting, including the four CHIP priorities — Obesity/Diabetes, Mental Health, Poverty, and Health Equity. Each summary sheet has the following sections:

- **Health Impacts:**
  What health outcomes are most affected by the topic?

- **Treatment:**
  How can the topic be mitigated or treated?

- **Comparison:**
  How is Marion County doing, compared to other locations, in terms of some key measure regarding the topic?

- **Trend:**
  How is some key measure of the topic changing in the past few years?

- **Risk Factors:**
  What increases the likelihood of the topic's occurrence?

- **Equity:**
  What are important differences, if any, in how the topic impacts different groups within the county?
Mental illness can reduce productive activities, the capacity for fulfilling relationships with other people, and the ability to adapt to change and to cope with challenges. Some of the more common mental illnesses include depression, anxiety, addictions, and eating disorders. Without treatment or effective management, any of these can be very debilitating, resulting in estrangement from friends and family, loss of income, job, or home, and even death. There are notable impacts on family and the community, as well.

Mental distress (having frequent poor mental health days) was similarly common in Marion County (13%), Indiana (13%) and the U.S. overall (12%). In 2018, 23.7% of Marion County adults reported ever having been diagnosed with depression, which is somewhat higher than the 18% reported in the U.S. overall. Each year in the last decade, Marion County has had close to 14 suicides per 100,000 residents. Over that period, the national rate rose from 12 to the Marion County rate of 14 per 100,000. As in the rest of the U.S., overdose deaths have risen rapidly; overdose deaths in Marion County doubled from 2010 to 2017, reaching 39 per 100,000 residents. The rise is almost entirely due to opioid overdose.

Two important strategies to improve mental health are to increase access to treatment and to decrease the stigma attached to mental illness. With increased access to care and decreased stigma, people will be more likely to seek treatment and other support needed to manage their illness. Increasing access to treatment includes increasing the number of treatment providers and improving insurance or other financial coverage of the costs of treatment. Technologies such as online therapy may also expand the reach and convenience of counseling and other treatment. Anti-stigma work will involve education and awareness programs and campaigns in workplaces, schools, faith communities, and other settings.

[xii] 2018 Marion County Community Health Assessment Survey (DR3708)

[xiii] 2018 BRFSS, CDC BRFSS Web Enabled Analysis Tool, https://nccd.cdc.gov/brfss?url=MMWR/crossTabulation “Ever told you that you have a depressive disorder, including depression, major depression, dysthymia, or minor depression (ADDEPEV2),” “All” locations.
Poverty has pervasive impacts on health. Having little income makes it difficult to maintain safe and stable housing, timely and good quality health care, and good nutrition, among other things. Poverty has been linked to chronic stress, particularly among children, which has been linked to a decreased executive function. Poverty is also associated with a shorter life expectancy, hypertension, asthma, and many other chronic diseases that decrease well-being and quality of life.

In Marion County, we found on the 2018 Marion County Community Health Assessment Survey that higher poverty was strongly related to higher rates of asthma, hypertension, high blood cholesterol, and heart disease diagnoses, among other health outcomes. For all four conditions, a higher percentage of people below the poverty guideline had been diagnosed with the condition than those who earned an income three times or more of the Federal Poverty Guideline (FPG). Adults who made less than 100% FPG were 43.3% more likely to have been diagnosed with asthma, 44.0% more likely to have been diagnosed with hypertension, 27.5% more likely to have been diagnosed with high blood cholesterol, and just over twice as likely to have been diagnosed with heart disease than adults who made more than 300% FPG.

To decrease poverty is difficult, but possible, and important. In fact, the CHA advisory group identified poverty as the top priority to address in improving health within the county. A primary way to address poverty is through policy changes. Policies that improve employment, increase wages, and support social programs that soften the impact of unexpected health or financial needs can lessen the health consequences of poverty, and even decrease poverty itself. For example, providing Medicaid coverage has increased the use of health care services, reduced financial strain, increased diagnosis and management rates of diabetes, and decreased the rate of depression among Medicaid recipients.

[xiii] Blair and Raver, “Poverty, Stress, and Brain Development”
Adults who made less than 100% FPG were 43.3% more likely to have been diagnosed with asthma, 44.0% more likely to have been diagnosed with hypertension, 27.5% more likely to have been diagnosed with high blood cholesterol, and just over twice as likely to have been diagnosed with heart disease than adults who made more than 300% FPG.
The MCPHD Community Health Improvement Plan covers a five-year time period — 2019-2024. The CHIP Strategy Committee was limited to the issue of health as it is impacted by poverty for that limited five-year time frame in this planning effort. However, this does not mean that the Committee does not understand that reducing poverty as a whole will take a comprehensive, multi-sectoral approach. To that end, the following feedback comments seem in order:

- There are no silver bullets or quick fixes to addressing the issue of poverty, as poverty is a systemic issue.

- Structural/institutional racism is a significant contributor to generational poverty.

- Solutions to poverty require a multi-sector, collaborative, collective impact approach. Lack of housing, education, income, health, jobs, prison reform, and basic needs need to be addressed collectively.

- Elevating the conversation about poverty in Central Indiana is long overdue and must continue to stay on the radar of policymakers and elected officials.

- Investment in relational work must be a key ingredient in every aspect of reducing poverty.

- There are interventions in Marion County that are working—they just need to be scaled up, elevated, and supported.
Solutions to poverty require a multi-sector, collaborative, collective impact approach. Lack of housing, education, income, health, jobs, prison reform, and basic needs need to be addressed collectively.
The 2019 Community Health Improvement Plan process involved three phases of activity including, generally, the steps outlined in the Association for Community Health Improvement (ACHI) Assessment Toolkit and are as follows:

1. Complete Community Health Assessment
2. Engage external stakeholders.
3. Align strategies with community stakeholder organizations.
4. Determine community assets.
5. Develop goals, objectives, and actions/strategies to address the priority needs.
6. Assign lead organization and partnering organizations for each action/strategy.
7. Implement the actions/strategies.
8. Evaluate progress annually
   A) Measure progress on each priority regularly.
   B) Use the results to modify or improve the actions/strategies.
   C) Communicate results to public health partners and to the community at large.

**PHASE ONE**

The first phase was the development of the Community Health Assessment using the data development of the MCPHD Department of Epidemiology, which is described in the previous section. One hundred thirty community members and representatives of community organizations selected three priorities: Obesity/Diabetes, Mental Health and Poverty. Health Equity was added later as a fourth priority.

In the final meeting of the Community Health Assessment Planning Committee on November 8, 2018, MCPHD made a call for volunteers to join the subsequent Community Health Improvement Plan Strategy Committee. Thirty one community members volunteered. A list of volunteers is shown in the Acknowledgments section at the beginning of this report.
The second phase was the development of the CHIP. The CHIP Strategy Committee met nine times between December 2018 and November 2019. The process was facilitated by Jamie Palmer of the Indiana University Public Policy Institute, a consulting partner to provide strategic guidance and facilitation of the CHIP process and develop the resulting reports and plan. The process was staffed by MCPHD staff.

The Committee identified an initial set of community assets for the three priority areas, including stakeholder organizations and current efforts. This list was updated with additional assets as the planning process progressed. A final list appears in Appendix B. The Committee, with the assistance of the facilitator and staff, identified local, state, and federal health efforts related to the three priorities as background and to ensure the alignment of the CHIP with these plans (Appendix D). After the final CHIP Strategy Committee meeting, Health Equity was added as a fourth priority area.

The Committee developed goals, objectives, and actions steps for each of the priorities. The CHIP Strategy Committee also identified lead and partnering organizations for each action step, as well as, indicators for tracking progress on the goals, objectives, and action steps during implementation. Full detail for the selected goals, objectives, action steps, lead and participating organizations, and indicators for each priority area are provided in Appendix A.

MCPHD will place the CHIP on an existing community engagement platform to assure residents have access to review the document and provide comments. The idea is to ensure that all members of the community have an opportunity to participate in plan development. This will also help to engage underrepresented residents. The diversity of our community is a source of pride for Indianapolis. As we continue to strive for participation from everyone, it is important to acknowledge the inequities, disparities, and environmental injustices that some of our community members face from historical and systemic discrimination and exclusion.
The third step is implementation and tracking. After adoption, MCPHD and its partners will work to implement the plan. The CHIP Strategy Committee will continue to provide executive oversight for the Plan’s progress. The Strategy Committee will expand membership to match the scope of the four priority areas and meet at regular intervals determined by the committee. Periodic community listening sessions will be held to share progress and engage residents in implementation and solicit feedback to strengthen the CHIP. The Committee and MCPHD staff will explore new and creative ways engage all interested parties.

After the CHIP has been vetted by community residents it will be placed on the MCPHD website and the Indy Indicators website. Indy Indicators is a free data resource which helps communities perform community health needs assessments, guides the development of community improvement plans, and much more.

IndyIndicators is a website about measuring, assessing and engaging people in the quality of life of Indianapolis and Marion County in the context of Central Indiana, the state and the nation. Users can also delve into school districts and townships and neighborhoods. It is managed by the Indiana Business Research Center and sponsored by the Marion County Public Health Department. Indicators to track the progress on the Marion County Community Health Improvement Plan — 2019-2024 will be posted on IndyIndicators at [http://indyindicators.iupui.edu](http://indyindicators.iupui.edu)
COMMUNITY HEALTH IMPROVEMENT PLAN
STRATEGY COMMITTEE

Community health improvement is a shared responsibility. The CHIP Strategy Committee is composed of the broad set of community organizations shown below. Many were previously working on efforts around the four priority areas and plan to participate actively in the implementation of the CHIP. The Committee will be expanded as implementation progresses.

Jonathan Barclay      Jump IN for Healthy Kids; Indiana Public Health Association
Brad Beaubien         City of Indianapolis Department of Metropolitan Development
David Berman          Mental Health of America—Indiana
Andrea Bochenek       MCPHD Department of Epidemiology
Elizabeth Bowman      MCPHD Department of Epidemiology
Amy Carter            Eskenazi Health Services
Abby Church           IU Health
Sandy Cummings        MCPHD Chronic Disease Program
Mary de Groot         Indiana University School of Medicine
Vickie Driver         Oxford Neighborhood Association
Kim Ewers             Indianapolis Public Library
Indra Frank           Hoosier Environmental Council
Joe Gibson            MCPHD Department of Epidemiology
Marion Greene         Indiana University Richard M. Fairbanks School of Public Health
James Groh            MCPHD Department of Epidemiology
Ellie Hansotte        MCPHD Department of Epidemiology
Taylor Hughes         Indianapolis Chamber of Commerce
Kim Irwin             Health By Design; Indiana Public Health Association
Nitika Jain           MCPHD Department of Epidemiology
Frankye Johnson       MCPHD Social Work Department
Karla Johnson         MCPHD Healthy Homes, Environmental Consumer Management and Senior Care
Darren Klingler       MCPHD Bureau Chief, Population Health
Denise Luster         United Way of Central Indiana
Lindsey Rabinowitch   Faith and Action Project, Christian Theological Seminary
Alison Redenz         MCPHD Chronic Disease Program

Kelli Smith           Covering Kids and Families
Cindy Stone           Indiana University Richard M. Fairbanks School of Public Health
Thomas Thaman         Eskenazi Health Services
Sarah Wiehe           CTSI, IU School of Medicine
Chelsy Winters        YMCA/Top 10 Coalition
2019 CHIP GOALS, OBJECTIVES AND ACTIONS

As the basis for developing the plan goals, objectives, and action steps, the Committee agreed on the following selection criteria for goals and objectives:

1. Realistic
2. No duplication of effort
3. Resources available
4. MCPHD partner involvement
5. Addresses equity
6. Strategic investment
   (i.e., If it’s missing, would other efforts not hold together.)
7. Needs to be SMART
   (specific, measurable, achievable, realistic, and timely)
Since community health improvement is a shared responsibility, the Plan’s development must include participation of a broad set of community partners. Over a period of ten months, the Community Health Improvement Plan Strategy Committee, made up of community partners supported by MCPHD staff and the Indiana University Public Policy Institute, developed and drafted goals, objectives, strategies, and action steps to address each priority area.

The committee members decided to concentrate on policy strategies as these produce the most impact on health matters. Participating partners also identified potential community assets and resources who may assist in the community health improvement effort. As these tasks were completed, committee members volunteered to accept responsibility to be a lead organization or a partner organization for implementing the outlined strategies.
OBJECTIVE #1: Increase availability and access to fruits, vegetables, and other nourishing foods in a variety of venues.

1. Expand the double-up produce incentive program, Fresh Bucks, offered for families on the Supplemental Nutrition Assistance Program.
2. Develop and expand a Produce Prescription (Rx) Program.
3. Increase the number of farmers markets authorized to use SNAP and redeeming SNAP.
4. Develop action plan for addressing census tracts with low income/low food access.
5. Expand community gardening and provide technical assistance and education about soil health.
6. Identify strategies to food initiatives to increase healthy food access.
7. Contribute needs assessment information and analysis for community level planning.
8. Explore funds for a dedicated staff person for the Indy Food Council.

OBJECTIVE #2: Increase the availability and access to fruits, vegetables, and other nourishing foods through nutrition standards and institutional policy strategies.

1. Incorporate extensive and creative nutrition “nudges” into food pantry environments to help guide pantry clients toward making healthier choices.
2. Expand the number of small stores and other retail outlets that have healthy food options that meet USDA Dietary Guidelines.
3. Advocate for healthy vending options in Marion County parks.
4. Work with food service management entities to increase nutritious foods offerings in public venues, worksites, congregate meals sites, and other sites where food is sold or served.
5. Expand the system of cooking education.
OBJECTIVE #3: Increase the percentage of women who initiate and sustain breastfeeding along with increasing supportive work environments for lactating mothers.
1. Facilitate access to existing breastfeeding resources.
2. Promote classes at 15 drop-in centers available at WIC clinics and healthcare settings.

OBJECTIVE #4: Strengthen the implementation of the IDOH school wellness provisions related to healthy eating best practices.
1. Provide education in schools re: healthy foods.
2. Assist community partners in developing resources and toolkits that equip the school community to respond to opportunities and threats to a healthy food environment.
3. Provide support for policy advocacy promoting healthy eating in school environments.
4. Promote comprehensive school wellness objectives that include but are not limited to employee wellness, modeling healthy behaviors, and the Whole School Whole Community Whole Child framework (see CDC/ASTD).

OBJECTIVE #5: Build awareness of the detrimental effects of sugar sweetened beverages have on health, particularly among children and vulnerable populations.
1. Create a brief white paper describing sugar sweetened beverage consumption data and an annotated bibliography of the health impact literature.
2. Create or sustain counter marketing efforts to reduce the consumption of sugar sweetened beverages.

OBJECTIVE #6: Build awareness about healthy food in all sectors (business, schools, faith communities, etc.) using a variety of current communications methods.
1. Develop a communications plan for the promotion of healthy food in the community.
2. Implement the communications plan.
GOAL 1B

Increase equitable, safe, accessible, convenient, and connected options for physical activity throughout the county.

OBJECTIVE #1: Expand walking, biking, and transit infrastructure in Marion County.

1. Work in priority areas (determined by high numbers of pedestrian crashes and other factors) to achieve improved walking conditions.
2. Update pedestrian crash analyses annually.
3. Promote walking, biking and transit use through programming, campaigns, shared-use agreements and/or other partner activities.
4. Provide thought leadership to elected officials, agency leaders, stakeholders and partners.
5. Offer technical assistance to neighborhoods and partner organizations.
6. Contribute to the development, adoption and implementation of active transportation plans and plan elements.
7. Advocate at the federal, state, regional and local levels for policies and funding that support active transportation.
8. Ensure plan, policy and project implementation at federal, state, regional and local levels.

OBJECTIVE #2: Encourage responsible land use by promoting affordable, inviting compact and mixed land uses that improve connectivity between destinations, neighborhoods, and communities.

1. Advocate for appropriate policies at the state, regional and local levels.
2. Contribute to the development, adoption and implementation of land use plans and plan elements.
3. Provide technical input on rezoning and variance petitions to City of Indianapolis Department of Metropolitan Development Current Planning Division and before the Metropolitan Development Commission.
4. Partner on place-based land use and active transportation initiatives.
OBJECTIVE #3: Increase physical activity opportunities and access.
1. Create a list of public assets available for physical activity and promote the use of those assets.
2. Promote the utilization of the Indiana Department of Health’s Small Business Toolkit and the MCPHD Heart Alive! Program among employers.
3. Assist local schools and community partners, such as parks, with the implementation of the shared use law.
4. Promote MPCHD’s Indy in Motion and Indy Silver Striders programs.
5. Continue the work of Health by Design’s Walkways Program.

OBJECTIVE #4: Strengthen the implementation of the IDOH school wellness provisions related to physical activity best practices.
1. Encourage schools to offer more opportunities for physical activity including more physical activity in the classroom (“brain breaks”).
2. Support school and community partners to increase safe and fun opportunities to walk and bike to school.
3. Strengthen standards-based physical education curriculum and professional development for physical education teachers.
4. Support the implementation of best practices for recess and active recess.

OBJECTIVE #5: Build awareness about the health benefits of walking, biking, and transit in all sectors (business, schools, faith communities, etc.) using a variety of current communications methods.
1. Develop a communications plan to promote the health benefits of physical activity in the community, to include the CDC’s Active People, Healthy Nation physical activity campaign.
2. Implement the communications plan.
OBJECTIVE #1: Improve diagnosis and health care access and continuity of care for people with and at risk for diabetes.
1. Support the expansion of screening, testing, and referral for those at high risk for diabetes to evidence based programs for prevention and control of diabetes through participation in the State Diabetes Plan.
2. Provide extensive outreach to African Americans and Latinos to facilitate linkages to diabetes prevention and management programs, cooking classes, and other existing resources.

OBJECTIVE #2: Increase accessibility to affordable health care, preventative services, insurance, medications, and tobacco cessation assistance as related to obesity and diabetes.
1. Increase access for all individuals through referrals from the clinical setting to community organizations.
2. Educate and connect individuals to evidence-based intervention programs using new information pathways between physicians and community organizations.
3. Advocate for an electronic health records (EHRs) program to incentivize and motivate clinicians and healthcare systems to identify patients who use tobacco and to provide them with evidence-based treatment.
4. MCPHD Covering Kids and Families navigators connect patients with or at risk for obesity and diabetes with health insurance and/or low-cost health services.

OBJECTIVE #3: Increase the number of environments that are smoke free.
1. Increase the number of comprehensive smoke free ordinances in Marion County’s excluded cities (Speedway, Beech Grove, and Southport).
2. Encourage smoke free policies in multi-unit housing properties.

OBJECTIVE #4: Compile research on obesogens and identify potential public health responses.
1. Compile research on obesogens and identify potential public health responses.
OBJECTIVE #1: Form a Marion County coordinating council for mental health care.
1. Form a Marion County coordinating council for mental health care.

OBJECTIVE #2: Develop a mental health data profile for Marion County.
1. Explore available data sources.
2. Prepare profile.

OBJECTIVE #3: Expand mental health screenings and referrals for treatment for the general population and for children.
1. Increase mental health screening in primary care settings.
2. Promote the use of an evidence-based suicide assessment in EMRs in all health care systems.
3. Continue work in IPS and encourage all school systems, schools, and universities to provide screening for mental health and referrals for care.
4. Advocate for additional funding for school mental health services.
5. Strengthen appropriate mental health responses by public safety and emergency preparedness institutions.
6. Advocate for training on suicide prevention, psychological first aid, and ACES.
7. Encourage mental health screening and services for persons coming out of incarceration.
8. Advocate for the provision of mental health and substance use disorder screening and services for pre-and-post-natal mothers by maternal health providers and pediatricians.

OBJECTIVE #4: Address shame-based stigma as an impediment to accessing mental health and substance abuse treatment.
1. Participate in upcoming stigma campaigns.
2. Incorporate anti-stigma materials into relevant services.
OBJECTIVE #5: Expand the number of mental health providers, the number of culturally and linguistically competent mental health providers and health translators, and providers and resources for integrated case management.

1. Inventory current available mental health provider, culturally and linguistically competent provider, and health translator resources in Marion County and identify current barriers to provider licensure.

2. Convene a conversation among relevant stakeholders about expanding the number of mental health providers, the number of culturally and linguistically competent mental health providers and health translators.

3. Support mental health policy initiatives to remove licensure, reimbursement, and other impediments to deploying community health workers and peer recovery coaches.

OBJECTIVE #6: Strengthen access to recovery supports such employment, housing, etc.

1. Convene a conversation among relevant stakeholders about collaborative ways to ensure and improve access to recovery supports.
OBJECTIVE #1: Enhance MCPHD partnerships and the inclusion of public health elements in community efforts to address poverty.

1. Participate in partner efforts.
2. Create an inventory of MCPHD partnerships and participating staff and develop internal protocols for maintaining participation and for sharing information about partners efforts within MCPHD.

OBJECTIVE #2: Build awareness with local audiences about the role of poverty and other social determinants of health in community health status; policy, systems, and environmental (PSE) change; and Health in All Policies.

1. Build awareness with local audiences about the role of poverty and other social determinants of health in community health status; policy, systems, and environmental (PSE) change; and Health in All Policies.
OBJECTIVE #1: Provide regular health equity data.
1. Provide regular health equity data.
2. Disseminate the MCPHD Epidemiology Health Equity data report.
3. Update the MCPHD Epidemiology Health Equity data report by 2023.

OBJECTIVE #2: Create and implement a health equity strategy for Marion County.
1. Create a health equity strategy for Marion County.
2. Convene community conversations and educational opportunities around health equity.
3. Encourage the adoption of Health in All Policies across agencies and governments in Marion County to ensure that services have a health equity lens.
4. Make basic health equity training a requirement for all MCPHD staff.

OBJECTIVE #3: Enhance MCPHD partnerships and the inclusion of public health elements in community efforts to address health equity.
1. Participate in partner efforts.
2. Create an inventory of MCPHD partnerships and participating staff and develop internal protocols for maintaining participation and for sharing information about partners efforts within MCPHD.
RELATIONSHIP BETWEEN THE CHIP AND OTHER INITIATIVES

The table in Appendix D is a non-exhaustive list of other plans in Marion County that contain objectives that relate to or will inform further planning and implementation strategies in the 2019 Marion County Community Health Improvement Plan. Those plans with an asterisk (*) have representation from the Marion County Public Health Department staff in their planning and implementation activities.

The table in Appendix E is a list of community plans that contain objectives and/or activities that relate to one or more of the 2018 Marion County Community Health Assessment priorities — obesity/diabetes, mental health, poverty, and health equity. A link to each plan is also provided.

SUSTAINABILITY AND REPORTING

The continuing CHIP process will ensure successful implementation and coordination of activities and resources among key partners. The CHIP Strategy Committee will continue to provide executive oversight for the Plan’s progress. The Strategy Committee will expand membership to match the scope of the four priority areas and meet at regular intervals determined by the committee. Periodic community listening sessions will be held to share progress and engage residents in implementation and solicit feedback to strengthen the CHIP. New and creative ways to feasibly engage all interested parties will be explored at the aforementioned engagement opportunities.

MOVING FORWARD

MCPHD will take the lead on providing a tracking report of actions taken in implementing the Community Health Improvement Plan. The report will include an evaluation of the strategies outlined and any revisions that were needed to the Plan.

WWW.MARIONHEALTH.ORG
Marion County Community Health Improvement Plan
Version: December 27, 2019

**Master Goal:** Improve the health and well-being of Marion County residents by addressing three focus areas—obesity/diabetes, mental health, and poverty—and by:

1. Aligning institutional priorities and resources
2. Engaging in strategic partnerships
3. Promoting a culture of health
4. Addressing health inequities and social determinants of health
5. Educating and communicating on priorities
6. Recommending and advocating for policy, systems, and environmental (PSE) changes
7. Empowering community members and organizations and ensuring that community members have meaningful decision-making roles in community health improvement efforts

**PRIORITY AREA: Obesity and Diabetes**

**GOAL 1:** Reduce the disease burden of obesity and diabetes, and improve the quality of life for all persons (adults and children) who are obese or have diabetes.

**Outcome Indicators:**

- Indicator 1: Decreased rate of obesity among adults measured (2023 CHA)
- Indicator 2: Decreased rate of diabetes among adults measured (2028 CHA)
- Indicator 3: Decreased rate of obesity among children measured (2023 CHA)
- Indicator 4: Decreased rate of diabetes among children measured (2028 CHA)
**PRIORITY AREA: Obesity and Diabetes**

**GOAL 1A: Increase access to affordable, healthy food wherever food is sold or served.**

**Outcome Indicators:**
- Indicator 1: Reduced adult food insecurity rate (Feeding America; may require calculation locally 2023 CHA)
- Indicator 2: Reduced child food insecurity rate (Feeding America; may require calculation locally 2023 CHA)
- Indicator 3: Increased percentage of people who eat the recommended number of dark green vegetables measured (2023 CHA)
- Indicator 3: Increased percentage of people who eat the recommended number of orange vegetables measured (2023 CHA)
- Indicator 3: Increased percentage of people who eat the recommended number of fruits measured (2023 CHA)

**OBJECTIVE #1: Increase availability and access to fruits, vegetables, and other nourishing foods in a variety of venues**

**PRIORITY AREA: Obesity and Diabetes**

**GOAL 1:** Reduce the disease burden of obesity and diabetes for adults and children, and improve the quality of life for all persons who are obese or have diabetes.

**GOAL 1C:** Foster a system of clinic-community linkages that supports obesity and diabetes prevention and control.

**Outcome Indicators:**
- Indicator 1: Increased number of people receiving care for diabetes (Indiana Network for Patient Care (INPC))
- Indicator 2: Increased number of screenings for diabetes (INPC)

**OBJECTIVE #1:** Improve diagnosis and health care access and continuity of care for people with and at risk for diabetes.

**Outcome Indicators:**
- Indicator 1: Increased proportion of persons diagnosed with diabetes (Diabetes Impact Project (DIP IN))
- Indicator 2: Increased proportion of persons diagnosed with pre-diabetes (DIP IN)
- Indicator 3: Increased number of people enrolled in diabetes prevention programs (2023 CHA)
- Indicator 4: Increased number of African Americans enrolled in diabetes prevention programs (2023 CHA)
- Indicator 5: Increased number of Latinos enrolled in diabetes prevention programs (2023 CHA)
- Indicator 6: Increased number of patients in diabetes and self-management education and training programs (American Association of Diabetes Educators; developmental)

Preparing for the November 8 meeting!
Thank you for being part of the Advisory Board for the 2018 Marion County Community Health Assessment. The effort’s culmination will be our meeting on November 8 to set priorities from among our narrowed list of topics. Please review these sheets before the meeting – you may want to bring them to the meeting, shuffled into the order in which you would prioritize them, or otherwise marked to indicate your thoughts.

In the meeting, we will briefly review each topic, discuss prioritization criteria, and select the top priorities to be included in the Community Health Assessment.

Topic summary sheets
We have created a summary sheet for each of the 15 topics. Each summary sheet has the following sections:

Health Impacts: What health outcomes are most affected by the topic?
Treatment: How can the topic be mitigated or treated?
Comparison: How is Marion County doing, compared to other locations, in terms of some key measure regarding the topic?
Trend: How is some key measure of the topic changing in the past few years?
Risk Factors: What increases the likelihood of the topic’s occurrence?
Equity: What are important differences, if any, in how the topic impacts different groups within the county?

Page 2 has information about the Impact Score and about interpreting graphs on the summary sheets. At the end of this document are more details about the Impact Score. In a separate document are appendices contain more information about the statistics in the summary sheets, their sources, and other details about the topic.

Impact Score Summary (all topics)......................................................................................................... 33
Impact Score Concept and Calculation................................................................................................. 34
Impact Score – use it cautiously
The Impact Score should be viewed as a very rough guideline, and not an exact measure. It is our attempt to summarize the county-wide health impact of the topic with one number. We intend it to stimulate discussion; it should not be viewed as a deciding factor. For some topics, we had no direct data for some components of the score; for instance, we know that our data about the prevalence of domestic violence is very incomplete. And some criterion were difficult to apply to some topics, such as, "by how much do the impacts of poverty increase medical costs?". So, for some issues, we had to extrapolate or make very rough estimates based on uncertain assumptions, to create parts of the impact scores. See the topic-specific appendix for details about the sources and calculation of each topic's impact score.

Bar graph "whiskers" and line graph "bands"
Some bar graphs on the summary sheets have "whiskers"—lines extending above and below the bar, to indicate the potential error in the estimate. The ends of the whiskers indicate the upper and lower ends of the 95% confidence limits; it is very likely (95% likely) that the actual value is somewhere within this range. The top of the bar (in the middle of the whiskers) is just our best estimate of the actual value. When the top of one bar is within the range of the whiskers of another bar, there is a notable chance that any difference could be due to random fluctuations, rather than meaningful, underlying differences.

Example: A bar graph with "whiskers"

![Bar graph example with whiskers](image)

The 95% confidence interval whiskers of "White, non-Hispanic" and "Hispanic" overlap with the top of each other group's bar, so obesity rate of Whites and Hispanics could be considered to be similar to each other. They do not overlap with the whiskers on the "Black, non-Hispanic" bar, so it is likely that there is a significant difference between the Black obesity rate and that of Whites or Hispanics.

Likewise, some of the line graphs have lines with lighter colored bands. These bands also indicate the 95% confidence range. If two points on a line fall within the confidence range of each other, there is a notable chance that the actual values are not significantly different.

Example: A line graph with a band:

![Line graph example with band](image)

The 95% confidence interval band for each year in this graph overlaps the point values of every other year. So the changes in the suicide rate are within a range that could be caused by random chance, rather than by notable changes in important risk factors.

Graphs without whiskers or bands indicating 95% confidence limits still have measurement error. For those graphs, the confidence limits were not available.
Crime

Violent crimes consist of murder, rape, robbery, assault, property crime, burglary, larceny, and motor theft. Crimes often influence the safety and wellbeing of a community.

Health Impacts
Increased risk of:
- Injury
- Depression
- Post traumatic stress disorder (PTSD)
- Death
- Negative perceptions of neighborhood safety

Comparison

Violent Crime, Marion Co. vs. other locations, 2016

Domestic Violence

Domestic violence (DV) takes the form of physical, psychological, or sexual violence, stalking, or control of reproductive health by a current or former intimate partner. Women are disproportionately impacted, but men are also victimized.

**Health Impacts**

Increased risk of:

- Physical injury/death
- Poor mental health
- Risky health behaviors
- Increased medical cost lasting up to 15 years
- Years of life lost

1165 new domestic violence cases per 100,000 persons, annually

Source: Marion County Health Department Vital Statistics

**Comparison**

Domestic Violence, Marion Co. vs. other locations, 2016

![Graph showing comparison of domestic violence cases per 100,000 residents between Marion County, Franklin County, OH, and US.]

Source: 2007-2011 US ACS; Ohio Bureau of Criminal Identification and Investigation

**Treatment**

- Law enforcement intervention
- Access to housing and financial assistance
- Access to physical & mental health care and substance use disorder treatment
- Improved attitudes toward DV (i.e., increased reporting and prosecution, revised gender norms)

**Trend**

Marion Co. Domestic Violence Incidents, 2009-2012

![Graph showing trend of domestic violence incidents in Marion County from 2009 to 2012.]

Source: Domestic Violence Network

DR3773
Risk Factors

- **Individual**: Low self esteem, income or education; young age; aggressive/delinquent behavior as a youth; heavy alcohol/substance use; depression; and more
- **Relational**: Marital conflict or instability; dominance by one partner over the other; economic stress; unhealthy family interactions
- **Community Factors**: Poverty and associated factors
- **Societal Factors**: Traditional gender norms

Equity

- Women were victims at a ratio of 4:1 when compared to their male peers, and women 20-24 years of age were at greatest risk
- Nearly half of female deaths from assault/homicide are thought to be caused by intimate partners
- African Americans were impacted at more than twice the rate of their white peers (2,037.5 vs. 939.1 per 100,000)
- Low-income neighborhoods have a higher reported incidence of domestic violence than middle- and upper-income areas

**Domestic Violence Victims by Age and Gender, Marion County, 2011**

![Domestic Violence Victims by Age and Gender, Marion County, 2011](chart.png)

*206 victims have unknown age*

Risk Factors

- Low-income households
- Households with children
- Single-parent households
- Households headed by Black, non-Hispanics or Hispanics (as compared to White, non-Hispanics)
- Adults with a mental health disability

Source: United State Department of Agriculture

Equity

Food Deserts, Marion Co. 2018

Source: Epidemiology Department, DR3512

About 21% of Marion County residents live in a food desert. A food desert is a low-income census tract in which at least 500 people or at least 33% of the population living more than 1 mile from the nearest supermarket, supercenter, or large grocery store.
**Health Care Access**

The ease with which an individual can obtain health services. The elements of health care access are health insurance coverage, the services provided, and the timeliness of deliveries.

---

**Health Impacts**

Increased risk of:

- Delay in receiving care
- Dying prematurely
- Untreated health complications
- Later diagnosis of a health condition
- Financial burdens
- Preventable hospitalizations.

---

**Comparison**

**Uninsured, Marion Co. vs. other locations, 2016**

![Bar chart showing percent prevalence of uninsured individuals in Marion County compared to other locations.]

Source: Big Cities Health Coalition

---

**Treatment**

- Health insurance for unemployed and low-income individuals
- High quality health services
- Transportation to services

---

**Trend**

**Marion Co. Uninsured, 2012-2018**

![Line graph showing trend of uninsured rate in Marion County from 2012 to 2018.]

Source: County Health Rankings and Roadmaps
Risk Factors

- High cost of care
- Unemployment
- Inadequate or no insurance coverage
- Far proximity to or lack of health services
- Lack of culturally competent care, including linguistic barriers

Source: Centers for Disease Control and Prevention, Healthy People 2020

Equity

Uninsured by Income, Marion Co. 2016

Uninsured by Income
Marion County residents with lower incomes are less likely to have health coverage.

Source: BRFSS

Uninsured by Race/Ethnicity, Marion Co. 2016

Uninsured by Race/Ethnicity
Marion County Hispanics are less likely to have health coverage.

Source: BRFSS

Uninsured by Gender, Marion Co. 2016

Uninsured by Gender
Marion County men are less likely to have health coverage.

Source: BRFSS
**Health Equity**

“Health equity means that everyone has a fair and just opportunity to be healthier. This requires removing obstacles to health such as poverty, discrimination, and their consequences, including powerlessness and lack of access to good jobs with fair pay, quality education and housing, safe environments, and health care.” Source: Robert Wood Johnson Foundation (RWJF)

Life Expectancy by ZIP Code, Marion Co. 2016

Marion County Life Expectancy, 2016

Life Expectancy varies by race and by location

- All Residents: 77.3
- Black non-Hispanic: 73.7
- White non-Hispanic: 78.3

Source: Marion County Death and Birth Certificates

Other Details

There is not one single metric for health equity. Instead, health inequities affect most indicators in public health. To try and succinctly show how health inequities can impact Marion County residents’ lives, life expectancy has been chosen as the main metric for this fact sheet. Other examples of health indicators impacted by health equity are highlighted in the area below.

**Diabetes Mortality Rate, 2016:**

- Black, non-Latino: 39 per 100,000
- White, non-Latino: 25 per 100,000

Homelessness

Individuals who do not have a permanent residence, including those who are sheltered and unsheltered. This condition can touch individuals and families, all genders, and all age groups. Though there are many who suffer chronic homelessness, others will be at risk and suffer homelessness for shorter periods.

Health Impacts

Increased risk of:

- Mental health disorders
- Substance abuse
- Tuberculosis
- Hypertension
- Asthma
- Diabetes
- Sexually Transmitted Infections
- HIV/AIDS.

179 homeless people per 100,000 persons, annually

Indianapolis Point-In-Time Count

On January 24, 2018:

- Approximately 12% of homeless adults were chronically homeless
- There were 128 families who experienced homelessness including 383 individuals in which 251 of them were under the age of 18
- Majority of school-aged children experiencing housing instability were in Indianapolis Public Schools (IPS)
- A total of 261 veterans were homeless

Source: Coalition for Homelessness Intervention & Prevention
Infant Mortality and Low Birth Weight

Infant mortality is the death of an infant that occurs during the first 365 days of life. An Infant Mortality Rate (IMR) is the number of babies who died in their first year of life per 1,000 live births. Note: Low birth weight (LBW) is defined as a birth weight less than 2,500 grams, or 5.5 lbs. Source: CDC

Mental Health

Mental health encompasses a multitude of diagnoses. Depression is one of the most common mental health diagnoses made and it is characterized by persistently depressed mood or loss of interest in activities, causing significant impairment in daily life. Depression can lead to suicide, or the act of intentionally causing one’s own death.

### Health Impacts

Increased risk of:

- Suicide – 50% of all suicides are due to depression
- Substance abuse – 2x more likely to be diagnosed with a substance use disorder
- Sleep disorders
- Poor social skills
- Relationship issues

### Comparison

Suicide Mortality, Marion Co. vs. other locations, 2016

* Topics get one point per criterion met, except: 1) If "Equivalent", give 0.5 points. 2) Prevalence is scored 0-10: 9 or 10 for a prevalence of 25% or more; 7 or 8 for 10% - 24.9%; 5 or 6 for 1% - 9.9%; 3 or 4 for .1% - .9%; 1 or 2 for .01% - .09%; 0 for < .01%.
Impact Score Concept and Calculation

Calculation of the Impact Score

The impact score combines the size and severity of the topic. It assigns points to 1) the number of cases (the number of persons affected) and 2) how much each of those cases (each person) is affected. We used a modified Hanlon Score method, similar to that used in Cook County, Illinois, for their community health assessment of few years ago. For each topic, we assigned 1) between 0 and 10 points based on the number of cases (the prevalence), and 2) 0 to 10 points based on the impact per case (the severity). We multiplied the severity points by two, then added the prevalence points, to get the overall impact score.

Example of the Impact Score calculation: Diabetes

Diabetes got a severity score of 8 and a prevalence score of 7, for a total impact score of 23, because (2 * 8) + 7 = 16 + 7 = 23.

Why did diabetes get 7 points for its prevalence? The prevalence of diabetes in Marion County is about 16%, which is in the 7 to 8 point range (between 10% and 24.9%) and closer to 10% than to 25%, so diabetes got 7 prevalence points. See below for a table of points per prevalence range, and other scoring details.

Why did diabetes get 8 severity points? Each topic got up to one severity point for each of ten criteria. Three criteria were related to morbidity (quality of life impact, medical costs, and other costs), three to mortality (early death, in top 5 causes of death, in top 15 causes of death), two to equity (are some subpopulations in our county have notably greater prevalence, or greater morbidity or mortality), and one each for worsening trend and for whether Marion County had poorer related health statistics that other cities. Diabetes in Marion County met all those criteria except being in the top 5 causes of death, and being worse than other cities, and so got a severity score of 8. See below for a table of points per severity criterion, and other scoring details.

Impact Scoring Instructions

Documentation

As you create a Hanlon score, be sure to document your sources of information. If you have reliable but conflicting data, or no reliable data, or if you had to make a questionable methodology choice, include notes about that issue if it had a notable impact on the score. Do not include extensive notes about things that would not impart the score.

Calculation

The Hanlon Score is calculated as:

\[ \text{Hanlon Score} = \text{Size} + (2 \times \text{Seriousness}) \]

Size and Seriousness are calculated as indicated below.

<table>
<thead>
<tr>
<th>Rating</th>
<th>Size of Health Problem (% of population with health problem [incidence or prevalence])</th>
</tr>
</thead>
<tbody>
<tr>
<td>9 or 10</td>
<td>&gt;25% (STDs)</td>

</table>

Morbidity
- Does the condition reduce an individual's Quality of Life?
- Does the condition cost more than $300 annually in medical expenses?
- Does the condition cost more than $1000 annually in all related costs?

Mortality
- Does the condition contribute to early death? (top rankable causes of death for individuals < 75 years)
- Is it one of the identified top 15 rankable causes of death? (1-5 rank = 2pts, 6-15 = 1pt)

Equity
- Is the condition more prevalent in disadvantaged populations?
- Is the per-case morbidity burden greater in disadvantaged populations, or are disadvantaged populations more likely to die of this condition?

Trend
- Is the prevalence or severity getting significantly worse?

Comparability
- Relative to data available for other geographies (state or national), is our jurisdiction better (0pts), equivalent (0.5 pts), or worse (1pt)?
## Example: Cardiovascular Disease/Hypertension (from Cook County, without the Trend criterion)

| STAR Communities (continued) | Public Park Land: Purpose | Create a system of well-used and enjoyable public parkland that features equitable and convenient walkable access for residents throughout the community | Action 11: Facility and Infrastructure Improvements  
Enable joint use of school-based recreation facilities during non-school hours |
| The STAR communities standards that Indianapolis utilized are sometimes different than the standards in the guidebook | Outcome 1: Acreage | Provide ample parkland based on population density as follows:  
• High: 6.8 acres per 1,000 residents  
• Intermediate-High: 7.3 acres per 1,000 residents  
• Intermediate-Low: 13.5 acres per 1,000 residents  
• Low: 20.3 acres per 1,000 residents | |
| | Outcome 2: Proximity | Demonstrate that housing units are located within a 1/2-mile walk distance of public parkland based on population density as follows:  
• High or Intermediate-High: 85% or greater  
• Intermediate-Low or Low: 70% or greater | |
| | Outcome 3: Connectivity | Demonstrate that 90% of households are located within 3 miles of off-road trail access | |
| | Outcome 4: Use and Satisfaction | Option A: Demonstrate that 66% or more of surveyed residents visit a park at least once a year  
--OR--  
Option B: Demonstrate that 66% or more of surveyed residents respond favorably regarding the quality of the community’s public park system | |
| | Outcome 1: Acreage | Provide ample parkland based on population density as follows:  
• High: 6.8 acres per 1,000 residents  
• Intermediate-High: 7.3 acres per 1,000 residents  
• Intermediate-Low: 13.5 acres per 1,000 residents  
• Low: 20.3 acres per 1,000 residents | Action 1: Plan Development  
Adopt a parks and/or open space plan that promotes a communitywide network of public spaces that provide recreational and transportation benefits while protecting natural, historic, and cultural resources |
| | Outcome 2: Proximity | Demonstrate that housing units are located within a 1/2-mile walk distance of public parkland based on population density as follows:  
• High or Intermediate-High: 85% or greater  
• Intermediate-Low or Low: 70% or greater | Action 3: Policy and Code Adjustment  
Adopt regulatory strategies or development incentives to create, maintain, and connect public parkland |
| | Outcome 3: Connectivity | Demonstrate that 90% of households are located within 3 miles of off-road trail access | Action 4: Policy and Code Adjustment  
Adopt site design guidelines for new public parklands and improvements to existing facilities to strengthen environmental benefits and provide visitor amenities |
| | Outcome 4: Use and Satisfaction | Option A: Demonstrate that 66% or more of surveyed residents visit a park at least once a year  
--OR--  
Option B: Demonstrate that 66% or more of surveyed residents respond favorably regarding the quality of the community’s public park system | Action 5: Partnerships and Collaboration  
Participate in a local or regional alliance working to improve and expand the communitywide or regional park system |
| | Outcome 1: Acreage | Provide ample parkland based on population density as follows:  
• High: 6.8 acres per 1,000 residents  
• Intermediate-High: 7.3 acres per 1,000 residents  
• Intermediate-Low: 13.5 acres per 1,000 residents  
• Low: 20.3 acres per 1,000 residents | Action 6: Partnerships and Collaboration  
Create an advisory board to regularly receive feedback from residents and organizations regarding planning, decision-making, and other issues affecting the quality and availability of public |
| | Outcome 2: Proximity | Demonstrate that housing units are located within a 1/2-mile walk distance of public parkland based on population density as follows:  
• High or Intermediate-High: 85% or greater  
• Intermediate-Low or Low: 70% or greater | Action 8: Programs and Services  
Provide assistance for low-income users to access and use public parklands and programming through subsidy, scholarships, and discounts |
| | Outcome 3: Connectivity | Demonstrate that 90% of households are located within 3 miles of off-road trail access | Action 9: Programs and Services |
| | Outcome 4: Use and Satisfaction | Option A: Demonstrate that 66% or more of surveyed residents visit a park at least once a year  
--OR--  
Option B: Demonstrate that 66% or more of surveyed residents respond favorably regarding the quality of the community’s public park system | |

Fishers Mental Health Task Force/Initiative [https://tinyurl.com/r6pzlol](https://tinyurl.com/r6pzlol)

Detail taken from the 2017 Mental Health Report

| Goal 1. Improve education and training | 1. Develop and implement mental health training and operations programs for Fishers’ first responders and HSE Schools 2. Develop collaborative relationships to share information and conduct quarterly audit/review of mental health runs 3. Develop and implement a community-wide outreach and communications campaign 4. Create and implement an awareness training program for SPORTS coaches 5. Facilitate a partnership and action plan for the interfaith community to address and support mental health within their mission |
| Education and training goals encourage thorough and consistent training among professionals most likely to encounter residents who may require care as well as community education to eliminate the stigma surrounding mental illness and mental health. | |

| Goal 2. Enhance local resources and access to services | 1. Remodel the community para-medicine program to include protocols for mental health runs 2. Develop intensive care coordination program for youth. |
| Resources and access goals are aimed at enhancing the delivery of services across the spectrum including those services needed when a mental health crisis occurs and those that work to prevent a crisis. | |
**GOAL 2: Improve mental health outcomes and access to mental health care in Marion County.**

“The group is focused on creating a community where care comes first and is working to improve wellbeing across the spectrum of health—mental, physical, social, emotional and spiritual—by bettering community-wide processes, resources and training opportunities.”

“The Wellbeing Coalition convened a cross-community group to drive action with input from public safety agencies, as well as school, religious, non-profit, business, healthcare and sports organizations. The group will launch its webpage and release its strategic action plan to the community in May during National Mental Health Month.”

| Indy Plan 2020 | Economic Mobility: Access to better jobs and income | Increase the number of and raise the visibility of “earn while you learn” training opportunities for adults who want to increase their skills but are unable to go to school full-time because of other obligations. | Community Partner: Employ Indy
Expand the number of opportunities provided by flexible, locally created on the job training programs (work-based learning training opportunities, etc.)
Increase visibility and community based connections to training opportunities in neighborhoods.
Increase the opportunities for youth to improve their skills and their earning potential. |

Leverage the economic strength and place-based nature of Indianapolis’ anchor institutions to expand neighborhood-based pilots for hiring and training unemployed and underemployed residents in the neighborhood where the business is located/locating.

Community Partner: Indy Chamber
Partner with EmployIndy to convene anchor institution human resource leaders to identify the challenges and opportunities to training, hiring and retaining workers from the surrounding neighborhoods.
Create employer education and outreach effort among Indy Chamber members to enlist more private sector employers voluntarily adopting “ban the box.”

Expand the number of youth participating in career preparation opportunities to increase the likelihood they will be knowledgeable about and prepared to pursue high quality post-secondary opportunities leading to career pathways.

Community Partner: MCCOY
Create, implement and monitor an ongoing program that links youth that have completed job-readiness training with (public and private) employers during school breaks.
Actively partner with Indiana Black Expo to recruit and support at risk youth to get them engaged in the “job readiness” certificate program and the “school break” youth employment program. |

| Indy Plan 2020 (continued) | Economic Mobility: Access to better jobs and income | Increase the opportunities for adult learners of all ages to successfully complete a diploma recovery program; one that focuses on attainment of post-secondary credentials or job placement. | Community Partner: Goodwill  
Track state budget and legislative action around charter funding and the impact that the expansion of the number of adult high schools could have on the local community.  
Advocate at city and state levels for increased funding to support adult high schools. |
| Thrive Indianapolis Plan | Upward trend in the percentage of the population that reports being active, healthy, and happy. | PH-1A: Collaboratively engage the Marion County Public Health Department and relevant local government departments or agencies to integrate health considerations (typically referred to as “Health in All Policies”) into local plans and policies related to the built environment, physical activity and access to fresh food with equitable benefits for everyone in the community before 2024. |
APPENDIX H
Glossary:

**Built Environment** — includes all of the physical parts of where we live and work (e.g., homes, buildings, streets, open spaces, and infrastructure). The built environment influences a person’s level of physical activity. For example, inaccessible or nonexistent sidewalks and bicycle or walking paths contribute to sedentary habits. These habits lead to poor health outcomes such as obesity, cardiovascular disease, diabetes, and some types of cancer. ([https://www.cdc.gov/nceh/publications/factsheets/impactofthebuiltenvironmentonhealth.pdf](https://www.cdc.gov/nceh/publications/factsheets/impactofthebuiltenvironmentonhealth.pdf) CDC [Cited 2018 April 5])

**Chronic Disease** — defined by the U.S. National Center for Health Statistics, a disease lasting three months or longer. ([Learn more at: http://www.nationalhealthcouncil.org/newsroom/about-chronic-conditions#1](http://www.nationalhealthcouncil.org/newsroom/about-chronic-conditions#1) Cited 2018 April 5)

**Community** — Community is a group of people who have common characteristics; communities can be defined by location, race, ethnicity, age, occupation, interest in particular problems or outcomes, or other similar common bonds. Ideally, there would be available assets and resources, as well as collective discussion, decision-making and action. ([Turnock, BJ. Public Health: What It Is and How It Works. Jones and Bartlett, 2009])

**Community Health** — Community health is a field within public health concerned with the study and improvement of the health of biological communities. Community health tends to focus on geographic areas rather than people with shared characteristics. ([http://dictionary.reference.com/browse/community+health](http://dictionary.reference.com/browse/community+health)) The term “community health” refers to the health status of a defined group of people, or community, and the actions and conditions that protect and improve the health of the community. Those individuals who make up a community live in a somewhat localized area under the same general regulations, norms, values, and organizations. For example, the health status of the people living in a particular town, and the actions taken to protect and improve the health of these residents would constitute community health. ([http://www.encyclopedia.com/topic/Community_Health.aspx](http://www.encyclopedia.com/topic/Community_Health.aspx))

**Culture of Health** — A culture of health is achieved when the collective set of individual and institutional priorities promotes comprehensive health, generates a perception of the need for well-being, and empowers all to lead healthier lives now and in generations to come. A culture of health is best accomplished by weaving health into all policies, decisions and activities.

**Demographics** — Demographics are characteristic-related data, such as size, growth, density, distribution, and vital statistics, which are used to study human populations. ([Turnock, BJ. Public Health: What It Is and How It Works. Jones and Bartlett. 2009])

**Evidence-based (public health)** — defined as the development, implementation, and evaluation of effective programs and policies in public health through application of principles of scientific reasoning, including systematic uses of data and information systems, and appropriate use of behavioral science theory and program planning models. ([https://phpartners.org/tutorial/04-ebph/2-keyConcepts/4.2.2.html](https://phpartners.org/tutorial/04-ebph/2-keyConcepts/4.2.2.html) Partners in Information Access for Public Health Workforce [Cited 2018 April 5])

**Goals** — Goals are general statements expressing a program’s aspirations or intended effect on one or more health problems, often stated without time limits. ([Turnock, B.J. Public Health: What It Is and How It Works. 4th ed. Sudbury, MA: Jones and Bartlett; 2009.)

**Healthy People 2020** — Healthy People 2020 is a document that provides science-based, 10-year national objectives for improving the health of all Americans. For three decades,
Healthy People has established benchmarks and monitored progress over time in order encourage collaborations across sectors; guide individuals toward making informed health decisions and measure the impact of prevention activities. (www.healthypeople.gov/2020)

**Objectives** – Objectives are targets for achievement through interventions. Objectives are time limited and measurable in all cases. Various levels of objectives for an intervention include outcome, impact, and process objectives. (Turnock, B.J. Public Health: What It Is and How It Works. 4th ed. Sudbury, MA: Jones and Bartlett; 2009.)

**Partnership** – A partnership is a relationship among individuals and groups that is characterized by mutual cooperation and responsibilities. (Scutchfield, FD, and CW Keck. Principles of Public Health Practice. Delmare CENGAGE Learning. 2009)

**Population Health** - Population health is a cohesive, integrated and comprehensive approach to health considering the distribution of health outcomes within a population, the health determinants that influence the distribution of care, and the policies and interventions that impact and are impacted by the determinants. (Nash, Reifsnyder, Fabius, and Pracilio. Population Health: Creating a Culture of Wellness. Jones and Bartlett. MA, 2011)

**Public Health System** – Public health systems are commonly defined as “all public, private, and voluntary entities that contribute to the delivery of essential public health services within a jurisdiction.” This concept ensures that all entities’ contributions to the health and well-being of the community or state are recognized in assessing the provision of public health services. The public health system includes:

- Public health agencies at state and local levels
- Healthcare providers
- Public safety agencies
- Human service and charity organizations
- Education and youth development organizations
- Recreation and arts-related organizations
- Economic and philanthropic organizations
- Environmental agencies and organizations

**Social Determinants of Health** – Healthy People 2020 defines social determinants of health as conditions in the environments in which people live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks. Conditions (e.g., social, economic, and physical) in these various environments and settings (e.g., school, church, workplace, and neighborhood) have been referred to as “place.” In addition to the more material attributes of “place,” the patterns of social engagement and sense of security and well-being are also affected by where people live. (https://www.cdc.gov/socialdeterminants/faqs/index.htm CDC [Cited 2018 April 5])

**State Health Assessment (SHA)** – State health assessment is a systematic examination of the health status indicators for a given population that is used to identify key problems and assets in a State. The ultimate goal of a State health assessment is to develop strategies to address the state’s health needs and identified issues. A variety of tools and processes may be used to conduct a state health assessment; the essential ingredients are community engagement and collaborative participation. (Turnock, B. Public Health: What It Is and How It Works. Jones and Bartlett, 2009).

**State Health Improvement Plan (SHIP)** – A state health improvement plan is a long-term, systematic effort to address public health problems on the basis of the results of state health assessment activities and the state health improvement process. A plan is typically updated every three to five years. (http://www.cdc.gov/stltpublichealth/cha/plan.html) This plan is used by health and other governmental education and human service agencies, in collaboration with community partners, to set priorities and coordinate and target resources. A state health improvement plan is critical for developing policies and defining actions to target efforts that promote health. It should define the vision for the health of the state through a collaborative process and should address the gamut of strengths, weaknesses, challenges, and opportunities that exist in the state to improve the health status of that state (Adapted from: United States Department of Health and Human Services, Healthy People 2010. Washington, DC)
**Strategic Plan** - A strategic plan results from a deliberate decision-making process and defines where an organization is going. The plan sets the direction for the organization and, through a common understanding of the mission, vision, goals, and objectives, provides a template for all employees and stakeholders to make decisions that move the organization forward. (Swayne, Duncan, and Ginter. *Strategic Management of Health Care Organizations*. Jossey Bass. New Jersey. 2008).

**SWOT Analysis** - A strategic planning method used to evaluate the strengths, weaknesses, opportunities, and threats to determine strategic objectives. Strengths are characteristics of organization that give it an advantage over others; Weaknesses are characteristics that place the organization at a disadvantage relative to others; Opportunities are elements that the organization could exploit to its advantage; Threats are elements in the environment that could cause trouble for the organization. The analysis associates the internal and external data to develop strategies.

**Values** - Values describe how work is done and what beliefs are held in common as a basis for that work. They are fundamental principles that organizations stand for. (Swayne, Duncan, and Ginter. *Strategic Management of Health Care Organizations*. Jossey Bass. New Jersey. 2008)

**Wellness** - Wellness is the quality or state of being in good health especially as an actively sought goal. (www.merriamwebster.com/dictionary/wellness)
