

MDMB-4en-PINACA Detected in Marion County, IN

Released June 12, 2024

Good afternoon, all,

We are writing to inform you of an emerging synthetic cannabinoid, MDMB-4en-PINACA. MDMB-4en-PINACA has been detected in Marion County, IN through our syringe surveillance data. It has also recently been detected in toxicology results of suspected fatal overdoses along with other opiates and stimulants.

MDMB-4en-PINACA is often sold as a 'legal' replacement for cannabis and controlled synthetic cannabinoids.

Associated health effects include:

- cardiovascular effects (such as elevated blood pressure, fast heart rate, heart attack/stroke)
- unresponsiveness
- seizures
- delirium
- psychosis

We encourage you to please share this information with your networks, or any other audience you see fit.

If you have any questions, or need additional information, please reach out to me directly at ddiazhernandez@marionhealth.org

Thank you and have a good day,
