MESSAGE TO THE COMMUNITY

Virginia A. Caine, M.D.
Director & Chief Medical Officer

It is my pleasure to present this report to the community, highlighting the Marion County Public Health Department's activities for 2024. This year documents a remarkable and historic year for public health in Indiana- State Policymakers provided critical new funding with the Health First initiative to support primary core public health services and improve public health infrastructure. We live in a rapidly changing world where the next major crisis is just around the corner. This report provides many examples of how we achieved our goals of protecting the health of our community, preventing disease, injury, and disability, and preparing the public to respond better to health concerns. But whatever challenges we faced, our team of dedicated health professionals responded with integrity, determination, expertise, compassion, and speed to protect the health and well-being of our residents.

The Marion County Public Health Department is committed to improving the health and well-being of those who live, work, or visit Marion County. This report chronicles the numerous accomplishments made by the health department in 2024.

As you read this report, please notice the extent to which your health department delivers on all ten essential services of public health to you. Those services are: monitoring health; diagnosing and investigating health hazards; informing and educating about health issues; mobilizing partnerships; developing health policies; enforcing environmental laws; improving access to care; assuring a competent public health workforce; evaluating health services; and researching public health concerns. This is the standard of excellence that we always strive to achieve.

But public health must also be adaptable. In 2024, we conducted a Community Health Assessment using data and input from our partners and community to determine public health priorities for the next five years. We held community-wide violence reduction workshops to address rising gun violence among our youth. We had a groundbreaking ceremony for a new, state-of-the-art two-story public health laboratory and administrative building to better serve our community, which is expected to open in the fall of 2026. And for the widely anticipated total solar eclipse, we provided over 50,000 free protective eyewear to the public for safely viewing the event, which occurred over Indianapolis in the spring.

Our accomplishments would not be possible without our many partnerships and collaborations with the community that shares our goals and values. Collectively, we are making a difference.

We do it all for you!

Sincerely,

A handwritten signature in black ink that reads "Virginia A. Caine MD". The signature is written in a cursive, flowing style.

Virginia A. Caine, M.D.
Director and Chief Medical Officer

2024 HIGHLIGHTS

MCPHD performed a community health assessment in 2024, gathering demographic and health-related information about the population, and seeking input from community partners and the public to identify impactful health issues and health needs. The five priorities were selected to be addressed over the next five years: Mental Health, Equitable Access to Healthcare, Health Equity, Infant Mortality, and Housing.

MCPHD received a little more than \$11 million in Health First Indiana funds from the State of Indiana in 2024. The funds were used to support staff salaries in Dental Health, Sexually Transmitted Disease Control, TB Control and Case Management, Vital Records, Food Protection, Housing, and Water Quality and Hazardous Materials. Funds also supported the implementation of the 2024 Community Health Assessment for Marion County and the Marion County Top Ten Coalition.

MCPHD staff hosted a Public Health Open House on April 6. About 400 people attended the event, which included information about MCPHD programs and provided free protective glasses for safely viewing the upcoming total solar eclipse.

MCPHD hosted community-wide violence reduction workshops as part of a larger effort to reduce gun violence among our youth. The workshops included a presentation on MCPHD's Community Resource Directory, a website that connects parents, caretakers, and youth to more than 300 essential free or low-cost support services.

MCPHD's Dental Smile Mobile, a 40-foot, fully equipped mobile dental office providing preventive and basic services to children ages 2 to 19, gained access to two additional schools: one in Perry Township and one in Washington Township.

MCPHD staff helped construct the walls of a three-bedroom home during their fourth Habitat for Humanity Panel Build Event.

The National Medical Association (NMA), the nation's oldest and largest organization representing over 50,000 African American physicians and the patients they serve, recently installed Virginia A. Caine, M.D., as its 125th President during its 122nd Annual Convention and Scientific Assembly in New York City in August.

MCPHD held a groundbreaking ceremony for a new two-story public health laboratory, clinic, and administrative building. The new building – expected to open in fall 2026- will house the MCPHD's laboratory facilities, the Bell Flower Clinic, Vital Records offices, and Immunization Records offices.

MCPHD's Overdose Data to Action team planned and operated a door-to-door outreach event in a near-northeast neighborhood to provide information on overdose prevention and response, and to distribute naloxone – a medicine that rapidly reverses opioid overdoses. In addition to the outreach efforts, staff members and volunteers used litter pickers and heavy equipment boom trucks to collect and discard 2,260 pounds of debris from the neighborhood.

BUREAU OF ENVIRONMENTAL HEALTH OVERVIEW

The Bureau of Environmental Health consists of six departments:

- Environmental Health, Safety, and Management
- Food and Consumer Safety
- Healthy Homes, Environmental Consumer Management and Senior Care
- Housing and Neighborhood Health
- Mosquito/Rodent Control and
- Water Quality and Hazardous Materials Management.

The Bureau of Environmental Health is primarily responsible for enforcing laws and regulations that protect our health and ensure a safe and healthy environment. This is done through inspections of residential and business properties; cleaning vacant homes and lots; sampling residential wells, lakes, and streams; and providing services to eliminate pests that may cause disease. The Bureau also accomplishes this mission through education by attending neighborhood meetings; volunteering for activities that improve the quality of life for neighborhoods; working with our most vulnerable populations – children and seniors; producing educational newsletters; and serving on committees with public and private partners throughout the community to achieve health and safety goals.

BUREAU OF POPULATION HEALTH OVERVIEW

The Bureau of Population Health comprises 16 areas that provide a variety of direct personal health care and population health support services that cover the entire lifespan.

- ACTION Health Center
- Chronic Disease
- Community-Based Care
- Dental Health
- Foreign-born/Refugee Health Program / Tuberculosis (TB) Control
- Immunizations
- Infectious Diseases
- Maternal and Child Health
- Nutrition Services
- Public Health Laboratory
- Ryan White/HIV Services
- Sexually Transmitted Disease Control
- Social Work
- Substance Use Outreach Services
- Vital Records
- Women, Infants, and Children (WIC) Program

Vital Records maintains the official birth and death records for Marion County.

Several areas are involved in diagnosis, treatment, and population surveillance and control of communicable diseases, including the Infectious Diseases and Immunization Program, the Sexually Transmitted Diseases Control Program, the Tuberculosis Control Program, and the HIV/Ryan White Services Program.

Personal health care areas include the ACTION Health Center, Community-Based Care, which provides a variety of Public Health Nursing services; Dental Health Services; Maternal and Child Health Services; Community Nutrition Services; the WIC Program; Social Work Services; Substance Use Outreach Services; and Chronic Diseases.

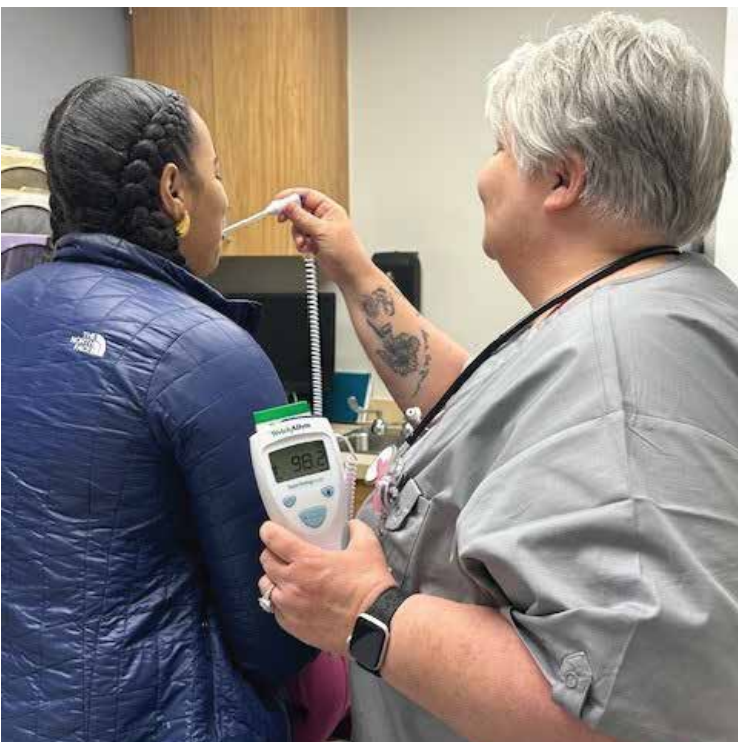

The Public Health Laboratory supports both agencies' bureaus, providing testing for clinical care and environmental protection.

Through its diverse services, the Bureau of Population Health impacts the county's health in many ways.

REFUGEE HEALTH

The refugee program works in partnership with local resettlement agencies, IDOH, FSSA, private sponsors, and healthcare providers to provide eligible clients with culturally and linguistically appropriate health screenings, assessments, and referrals. Our population includes refugees, secondary refugees, asylees, parolees, victims of human trafficking, and those seeking to become permanent U.S. residents.
