Thresholds for ILI and RSV Severity – Week 14, April 5, 2026 – April 11, 2026

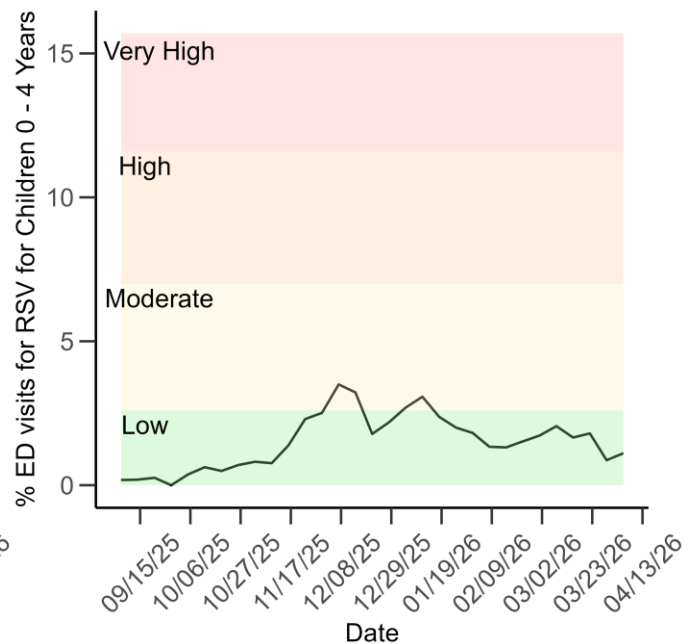

Marion County

- In Marion County, the severity of ILI is **low** and the severity of RSV for children 0 - 4 years old is **low** for Week 14. Severity thresholds were estimated using Marion County data from flu seasons 2017/2018 to 2024/2025.

Influenza-Like-Illness Severity: Low

RSV Severity for Children 0 - 4 Years: Low

Influenza Surveillance – Week 13, March 29, 2026 – April 4, 2026

Marion County

- During Week 13, **2.07% or 249 of Marion County ED visits had ILI symptoms.**
- In Marion County hospitals, the age group 0-4 years old had the highest percentage of ILI-related ED visits at 6.94% (72 visits), followed by 5-17 years old at 2.97% (35 visits).

Indiana

<https://www.in.gov/health/idepd/respiratory-disease/influenza/influenza-dashboard/>

- Indiana is experiencing **Minimal** ILI activity.
- IDOH reported 1.68% ILI at ED and urgent care visits and 1.77% ILI at sentinel provider sites.
- One influenza-associated death has been reported** during Week 13. A total of 237 deaths have been reported since the beginning of the season.

National

<https://www.cdc.gov/fluview/>

- Seasonal influenza (flu) activity continues to decrease in most areas of the country.
- According to the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet), **2.4% of outpatient visits to healthcare providers** were related to ILI (influenza-like illness). This percentage is below the baseline of 3.0%.
- During Week 13, 8.2% of **clinical laboratory specimens** were **positive for the influenza virus**.
- During Week 13, 52.5% of specimens were **positive for influenza viruses at public health laboratories**.
- **Thirteen influenza-associated pediatric deaths** were reported to CDC during Week 13. One of these deaths occurred during the 2024-2025 season. The other twelve deaths occurred between Week 47 of 2025 and Week 12 of 2026.
 - Six deaths were associated with an influenza A(H3N2) virus. Two of these deaths had subtyping performed and all were A(H3N2) viruses.
 - Six deaths were associated with influenza B viruses with no lineage determined.
 - A total of 139 influenza-associated pediatric deaths occurring during the 2025-2026 season have been reported to CDC.
